

Protector Shield
by
STRATAGLASS™

Strataglass and Herculite are pleased to provide our customers with a protective screen design and manufacturing guide that can be easily assembled using Strataglass clear vinyl, common industry pipe fittings and nylon cable ties for frame attachment.

WE ARE PROVIDING THIS AS A GUIDE ONLY. WE ARE NOT MANUFACTURING OR SELLING THE COMPLETED STRUCTURE.

The Protector Shield is a temporary clear vinyl screen system engineered for environments that require close personal interaction between employees and/or customers. The screen creates a protective shield between people. Ideal to isolate cashiers at checkout counters at any type of store. Can also be deployed between desks in an office environment. Maximum screen width of 9ft and maximum height of 4½ feet. Screen can be easily cut to any custom size smaller than those dimensions.

- Easy to manufacture and assemble, no sewing or grommets required
- Mounting holes cut with a ¼" or 3/8" hand side cutter at 12" spacing
- Shield attaches to frame with nylon cable ties
- Can be cleaned with alcohol
- Ultra-Clear, distortion free, and engineered to be scratch resistant
- Follow CDC guidelines and wash hands before manufacturing
- NOT AN FDA REGISTERED DEVICE
- NOTE: Strataglass makes NO CLAIM that these shields will protect you from contracting any virus or disease. Use at your own risk.
